

**BENDING SPOONS**

**FirstAscent**

B≈CAMP

ACADEMY · 2019 · FIRST EDITION

The ultimate bootcamp for  
programming lovers.

## Week 1

You'll start from the basics of Swift, the programming language of choice when developing on iOS. You'll hear about its data structures and the way memory is managed with Automatic Reference Counting (ARC).

## Week 2

You'll explore the basics of app development and learn how views are drawn and how touches and gestures are recognized. You'll hear about basic elements and views, such as UIButton, UITableView and UICollectionView.

## Week 3

You'll dive into [Katana](#) and [Tempura](#), the popular open-source libraries developed by Bending Spoons. Katana and Tempura are cutting-edge frameworks for modeling the app logic and user interface, and together they make developing a robust app quick and fun.

## Weeks 4 and 5

Time to practice what you've learned! Divided in teams, you'll work on a real app project, and you'll be impressed by how much ground you'll have covered in so little time.

CV and cover  
letter screening

Practical tests

Online interview
